Chapter 9 of Lane et al. (2019)

<section-header><text><page-footer>

The curse of OOV

Out-of-vocabularies cause big trouble

The Mexico City Metro, operated by the Sistema de Transporte Colectivo, is the second largest metro system in North America after the New York City Subway.

The Mexico_City Metro, operated by the \cdot de \cdot , is the second largest metro system in North America after the New_York City Subway.

Alternatives

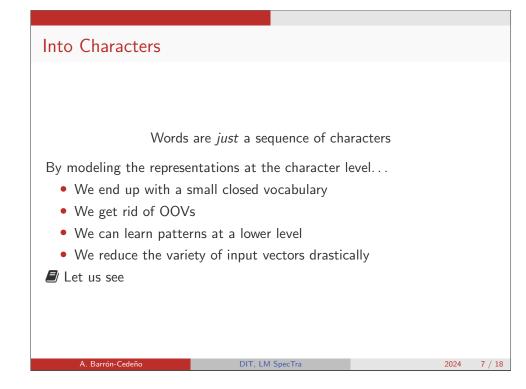

- Replace the unknown with a random word, from the embedding space
- Replace the unknown word wit UNK, and produce a random vector
- Turn into characters

https://en.wikipedia.org/wiki/Mexico_City_Metro (2021)

Into Characters: outcome

• The training takes no less than 30 minutes (it took me 36 last time)¹

epoch	seconds	acc	acc _{val}
1	208	0.5206	0.5934
2	190	0.6832	0.5900
3	184	0.7534	0.5826
4	183	0.8029	0.5664
5	182	0.8371	0.5654
6	182	0.8633	0.5652
7	182	0.8908	0.5672
8	179	0.9086	0.5774
9	178	0.9212	0.5744
10	179	0.9346	0.5898

¹2.5GHz Quad-Core Intel Core i7 with 16GB of RAM A. Barrón-Cedeño DIT, LM SpecTra

Into Characters: outcome

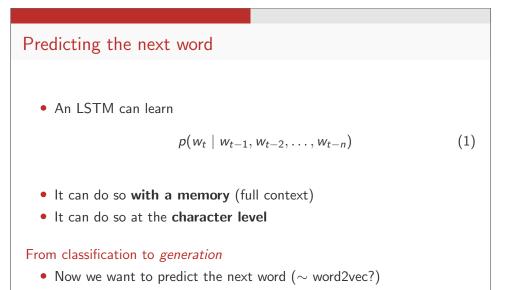

- The training accuracy is quite promising: ~ 93.00
- The validation accuracy is terrible: \sim 59.00
- Overfitting

Reasons/Solutions

- The model might be *memorising* the dataset
- Increase the dropout (try!)
- Add more labeled data (hard!)

A character-level model shines at its best when modeling/generating language $% \left({{\left[{{{\rm{s}}_{\rm{s}}} \right]}_{\rm{s}}} \right)$

DIT, LM SpecTra

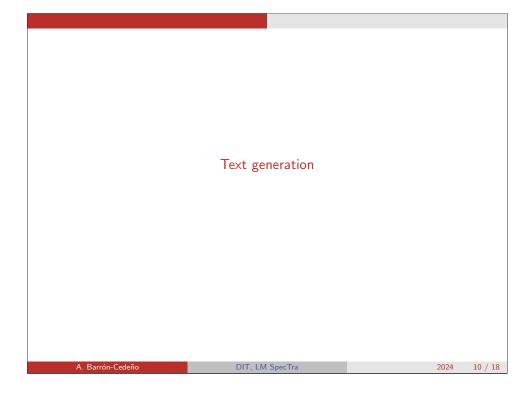

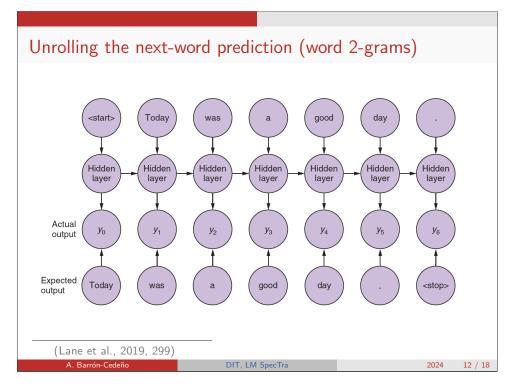

• We want to learn a *general* representation of language

	rón-

9 / 18

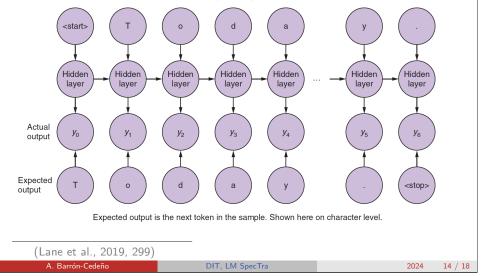

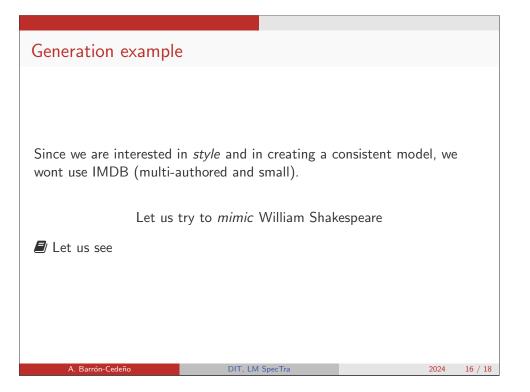

New target labels

New output: a one-hot encoding (again) of the next character

Adding Extra Stuff

- Expand the quantity and quality of the corpus
- Expand the complexity of the model (units/layers/LSTMs)
- Better pre-processing:
 - Better case folding
 - Break into sentences
- Post-processing
 - Add filters on grammar, spelling, and tone
 - Generate many more examples than actually shown to users
- Select better seeds (e.g., context, topic)

Most of these strategies apply to any problem you can think about!
